

R229D Solder Paste

Mildly Activated Rosin Solder Paste

Product Description

Kester R229D Solder Paste is a Mildly Activated Rosin (RMA) solder paste formula specifically designed to exhibit long stencil/print life. R229D maintains its activity and printing characteristics for up to 8 hours (temperature and humidity dependent).

Performance Characteristics:

- Consistent viscosity
- Extended stencil life (process dependent)
- Excellent printing characteristics to 0.5 mm (20 mil) pitch
- Long tack life
- Leaves bright/shiny solder joints after reflow
- Scrap is reduced due to less paste dry out
- Can reflow in air or nitrogen
- Classified as ROL1 per J-STD-004
- Compliant to Bellcore GR-78-CORE

Standard Applications:

Stencil Printing – 90% Metal

Syringe Dispensing – 88% Metal

Physical Properties

(Data given for Sn63/Pb37 and Sn62/Pb36/Ag02, 90% metal, -325+500 mesh)

Viscosity (typical): 900 kcps

Brookfield Viscometer RVDV -II+, TF Spindle @ 5 ppm, 25 °C, 1.0 inch spindle depth

Initial Tackiness (typical): 48 grams

Tested to Kester Method 1W-QC-3-04

Slump Test: Pass

Tested to J-STD-005, IPC-TM-650, Method 2.4.35

Solder Ball Test: Preferred

Tested to J-STD-005, IPC-TM-650, Method 2.4.43

Wetting Test: Pass

Tested to J-STD-005, IPC-TM-650, Method 2.4.45

Reliability Properties
Copper Mirror Corrosion: Low

Tested to J-STD-004, IPC-TM-650, Method 2.3.32

Corrosion Test: Low

Tested to J-STD-004, IPC-TM-650, Method 2.6.15

Silver Chromate: Pass

Tested to J-STD-004, IPC-TM-650, Method 2.3.33

Fluorides by Spot Test: Pass

Tested to J-STD-004, IPC-TM-650, Method 2.3.35.1

Surface Insulation Resistivity (SIR), IPC (typical): Pass

Tested to J-STD-004, IPC-TM-650, Method 2.6.3.3

	Blank	R229D
Day 1 (24h)	$5.2 \times 10^{10} \Omega$	$4.4 \times 10^8 \Omega$
Day 4 (96h)	$3.0 \times 10^{10} \Omega$	$2.9 \times 10^8 \Omega$
Day 7 (168h)	$3.2 \times 10^{10} \Omega$	$4.0 \times 10^8 \Omega$

Surface Insulation Resistivity (SIR), Bellcore (typical): Pass

Tested to Bellcore GR-78-CORE

	Blank	R229D
Day 1 (24h)	$1.3 \times 10^{11} \Omega$	$3.6 \times 10^9 \Omega$
Day 4 (96h)	$1.2 \times 10^{11} \Omega$	$9.9 \times 10^{10} \Omega$

Availability

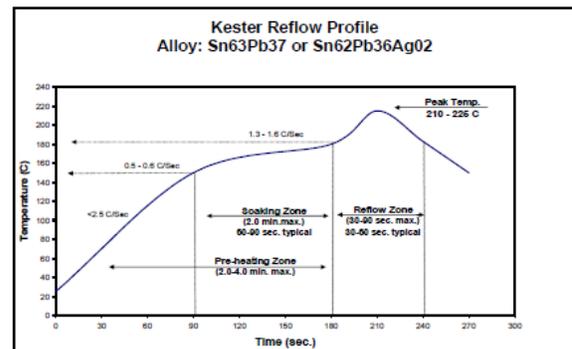

Kester R229D is commonly available in the Sn63Pb37 and Sn62Pb36Ag02 alloys. Type 3 powder mesh is recommended, but different powder particle size distributions are available for standard and fine pitch applications. For specific packaging information see Kester's Solder Paste Chart for available sizes. The appropriate combination depends on process variables and the specific application.

Printing Parameters

Squeegee Blade	80 to 90 durometer polyurethane or stainless steel
Squeegee Speed	15 to 40 mm/sec (0.6 to 1.6 in/sec) recommended; other speeds possible
Stencil Material	Stainless Steel, Molybdenum, Nickel Plated, Brass
Temperature/Humidity	Optimal ranges are 21 to 25 °C (70 to 77 °F) and 35 to 65% RH

Recommended Reflow Profile

The recommended reflow profile for R229D made with Sn63Pb37 and Sn62Pb36Ag02 is shown here. This profile is simply a guideline. Since R229D is a highly active, no-clean solder paste, it can solder effectively over a wide range of profiles. Your optimal profile may be different from the one shown based on your oven, board and mix of defects. Please contact Kester Technical Support if you need additional profiling advice.

Cleaning

R229D is an RMA formula. The residues do not need to be removed for typical applications. Although R229D is designed for no-clean applications, its residues can be easily removed using automated cleaning equipment (in-line or batch) with a variety of readily available cleaning agents. Call Kester Technical Support for details.

Recycling Services

We provide safe and efficient recycling services to help companies meet their environmental and legislative requirements and at the same time, maximize the value of their waste streams.

Our service collects solder dross, solder scrap, and various forms of solder paste waste. Please contact your local sales representative for recycling capabilities in your area or [link here](#).

Storage, Handling and Shelf Life

Refrigeration is the recommended optimum storage condition for solder paste to maintain consistent viscosity, reflow characteristics and overall performance. R229D should be stabilized at room temperature prior to printing. R229D should be kept at standard refrigeration conditions, 0 to 10 °C (32 to 50 °F). Please contact Kester if you require additional advice with regard storage and handling of this material. Shelf life is 6 months (in jar packaging) from date of manufacture when handled properly and held at 0 to 10 °C (32 to 50 °F).

Health and Safety

This product, during handling or use, may be hazardous to your health or the environment. Read the Safety Data Sheet and warning label before using this product. Safety Data Sheets are available at this [link](#).
