Product Description

Kester 186 Flux-Pen® is specifically designed for leaded and lead-free rework of conventional and surface mount circuit board assemblies. 186 Flux-Pen® under MIL-F-14256, was QPL approved as Type RMA. Although the fluxing ability approaches that of Type RA flux, residues after soldering are non-corrosive and non-conductive. 186 Flux-Pen® has been developed for use in critical applications where difficult assemblies are to be soldered, but process requirements stipulate use of Type RMA flux. 186 Flux-Pen® possess high thermal stability for soldering multi-layer assemblies which require higher temperatures. Exposure to high preheat temperatures does not degrade solubility of the residue in normal cleaning solvents. There is no surface insulation resistance degradation caused by the flux residue. The use of a minimum of ionic activating agents and the inactive nature of the residue permits leaving the residue on circuit board assemblies for many applications. The flux residue is also moisture and fungus resistant.

Performance Characteristics:

- High thermal stability
- Improves soldering performance
- Eliminates the need and expense of cleaning
- Classified as ROL0 per J-STD-004 & J-STD-004B

RoHS Compliance

This product meets the requirements of the Restriction of Hazardous Substances (RoHS) Directive. Additional RoHS information is located at https://www.kester.com/downloads/environmental.

Physical Properties

- Specific Gravity: 0.879
  Anton Paar DMA @ 25°C
- Flash Point: 18°C (64°F)
- Percent Solids (theoretical): 36%
  IPC-TM-650, Method 2.3.34
- Acid Number (typical): 55 mg KOH/g flux
  IPC-TM-650, Method 2.3.13

Reliability Properties

- Copper Mirror Corrosion: Low
  IPC-TM-650, Method 2.3.32
- Corrosion Test: Low
  IPC-TM-650, Method 2.6.15
- Silver Chromate: Pass
  IPC-TM-650, Method 2.3.33
- Chloride and Bromides: 0.02%
  IPC-TM-650, Method 2.3.35
- Electrochemical Migration (ECM):
  Pass
  IPC-TM-650 Method 2.6.14.1 [65°C, 85% RH, 100V, 21days]
- Surface Insulation Resistivity (SIR):
  Pass
  IPC-TM-650, Method 2.6.3.7
- Surface Insulation Resistivity (SIR):
  Pass
  IPC-TM-650, Method 2.6.3.3

**Flux Application**

186 Flux-Pen® is applied to circuit boards via Flux-Pen® for rework of printed wire assemblies.

**Process Considerations**

186 Flux-Pen® should only be applied to areas that will be fully heated by the soldering iron or other reflow tool. Care should be taken to avoid flooding the assembly. The surface tension has been adjusted to help the flux form a thin film on the board surface allowing rapid solvent evaporation.

**Cleaning**

186 Flux-Pen® flux residues are non-conductive, non-corrosive and do not require removal in most applications.

**Storage, Handling and Shelf Life**

186 Flux-Pen® is flammable. Store away from sources of ignition. Shelf life is 2 years from date of manufacture when handled properly and held at 10-25°C (50-77°F). The cap must be in place when not being used.

**Health and Safety**

This product, during handling or use, may be hazardous to your health or the environment. Read the Safety Data Sheet and warning label before using this product.
