**Product Description**

Kester 961-E is a no-clean, non-conductive, non-corrosive, zero-halogen and rosin-free liquid flux that is specifically designed for the wave soldering of conventional and surface mount circuit board assemblies. Essentially no residue remains after soldering. Boards are dry and cosmetically clean as they exit the wave solder machine, thus posing no interference with electrical testing. 961-E has been developed for bare copper soldering applications. This comprehensive formulation possesses improved wetting characteristics, which continuing to exhibit superior corrosion inhibiting properties and providing a non-tacky residue that is considered non-corrosive and non-conductive by common industry specifications. This non-corrosive and non-conductive flux meets the strictest requirements of Bellcore TR-NWT-000078 and IPC-SF-818 specifications. A major advantage of this flux is the reduced odor associated with the soldering process.

**Performance Characteristics:**

- Zero-Halogen (none intentionally added)
- Improves soldering performance
- Reduced odor associated with soldering process
- Eliminates the needs and expense of cleaning
- Non-corrosive tack-free residues
- No surface insulation degradation
- Compliant to IPC-SF-818
- Compliant to Bellcore TR-NWT-000078

**RoHS Compliance**

This product meets the requirements of the Restriction of Hazardous Substances (RoHS) Directive, 2015/863 for the stated banned substances.

**Physical Properties**

- **Specific Gravity:** 0.801 ± 0.005  
  Anton Paar DMA 35 @ 25°C
- **Percent Solids (theoretical):** 3.1  
  Tested by potentiometric titration
- **Acid Number (typical):** 20.0 mg KOH/g of flux  
  Tested by potentiometric titration

**Reliability Properties**

- **Copper Mirror Corrosion:** Low  
  Tested to J-STD-004, IPC-TM-650, Method 2.3.32
- **Copper Corrosion:** Low  
  Tested to J-STD-004, IPC-TM-650, Method 2.6.15
- **Spreading Test (typical):** 84%  
  Tested to JIS-Z-3197
- **Electromigration, Bellcore (typical):** Pass  
  Tested to Bellcore TR-NWT-000078
- **Surface Insulation Resistivity (SIR), Bellcore (typical):** Pass  
  Tested to Bellcore TR-NWT-000078

Flux Application

961-E can be applied to circuit board by spray or foam fluxing. To assure proper foaming action, filters and traps should be used on airlines to prevent direct and excessive water from contaminating the flux. Flux deposition should be 120-240μg of solids/cm² (750-1500μg of solids/in²). An air knife after the flux tank is recommended to remove excess flux from the circuit board and prevent dipping on the preheater surface.

Process Considerations

The optimum preheat temperature for most circuit assemblies is 90-105°C (194-221°F) as measured on the top or component side of the printed circuit board. The optimum preheat temperature for most circuit assemblies is 110-145°C (230-293°F) as measured on the bottom or component side of the printed circuit board. It is still important to note that the optimum preheat temperature for a given assembly will depend on the circuit board design, board thickness, length of contact time with molten solder, solder wave shape, speed of solder flow and preheating time. Dwell time in the wave is typically 2-4. The wave solder speed should be adjusted to accomplish proper preheating and evaporate excess solvent, which could cause splattering. For best results, speeds of 1.1-1.8 m/min (3.5-6 feet/min) are used. The surface tension has been adjusted to help the flux form a thin film on the board surface allowing rapid solvent evaporation. The solder pot temperature is recommended to be 245-260°C (473-500°F) for Sn63Pb37 alloy. Above information is a guideline and it is advisable to note that the optimum settings for a given assembly may vary and this is dependent on the circuit board design, board thickness, and components and equipment used. A design of experiment is recommended to be done to optimize the soldering process.

Cleaning

961-E flux residues are non-conductive, non-corrosive and do not require removal in most applications. If residue removal is required, call Kester Technical Support.

Storage, Handling and Shelf Life

961-E is flammable. Store away from sources of ignition. Shelf life is 1 year from date of manufacture when handled properly and held at 10-25°C (50-77°F).

Health and Safety

This product, during handling or use, may be hazardous to your health or the environment. Read the Safety Data Sheet and warning label before using this product.
