

# KESTER® 182 SOLDERING FLUX

## Mildly Activated Rosin Liquid Flux

### DESCRIPTION

Kester 182 Soldering Flux is a clear homogeneous solution of 25% pure colophony dissolved in isopropyl alcohol with 0.15% diethylamine hydrochloride (CAS 660-68-4). It has been formulated to meet the requirements of IPC J-STD-002 and J-STD-003 for solderability testing. 182 is highly recommended for solderability testing of leads, printed circuit boards and other electrical components because of its consistently high quality.

READ ENTIRE TECHNICAL DATA SHEET BEFORE USING THIS PRODUCT

### FEATURES & BENEFITS

- High quality for solderability testing
- Classified as ROL1 per J-STD-004

### ROHS COMPLIANCE

This product meets the requirements of the Restriction of Hazardous Substances (RoHS) Directive, 2011/65/EU for the stated banned substances.

### TECHNICAL DATA

Category	Results	Procedure/Remarks
<b>Physical Properties</b>		
Specific Gravity	0.843 ± 0.005	Antoine Paar DMA @ 25 °C
Percent Solids (typical)	25	Tested to J-STD-004, IPC-TM-650, Method 2.3.34
Flash Point	18 °C (64 °F)	
<b>Reliability Properties</b>		
Copper Mirror Corrosion	Low	Tested to J-STD-004, IPC-TM-650, Method 2.3.32
Corrosion Test	Low	Tested to J-STD-004, IPC-TM-650, Method 2.6.15

Category	Results	Procedure/Remarks
Silver Chromate	Pass	Tested to J-STD-004, IPC-TM-650, Method 2.3.33
Chloride and Bromides	0.05%	Tested to J-STD-004, IPC-TM-650, Method 2.3.35
Fluorides by Spot Test	Pass	Tested to J-STD-004, IPC-TM-650, Method 2.3.35.1

## FLUX APPLICATION

182 is typically applied by a dip process.

## PROCESSING GUIDELINES

182 is highly recommended for solderability testing of leads, printed circuit boards and other electrical components because of their consistently high quality.

### Flux Control

Specific gravity is normally the most reliable method to control the flux concentration of rosin-based fluxes. To check concentration, a hydrometer should be used. The solvent system for the flux makes it imperative that Kester 4662 Thinner be used to replace evaporative losses. When excessive debris from circuit boards, such as board fibers and from the airline build up in the flux tank, these particulates will redeposit on the circuit boards which may create a buildup of residues on probe test pins. It is, therefore, necessary to clean the tank and then replenish it with fresh flux when excessive debris accumulates in the flux tank.

### Cleaning

182 residues are non-conductive, non-corrosive and do not require removal in most applications. If residue removal is required, call MacDermid Alpha Technical Support.

### Storage, Handling and Shelf Life

182 is flammable. Store away from sources of ignition. Shelf life is 2 years from the date of manufacture when handled properly and held at 10 to 25 °C (50 to 77 °F).

## RECYCLING SERVICES

We provide safe and efficient recycling services to help companies meet their environmental and legislative requirements and at the same time, maximize the value of their waste streams.

Our service collects solder dross, solder scrap, and various forms of solder paste waste. Please contact your local sales representative for recycling capabilities in your area.

## SAFETY & WARNING

It is recommended that the company/operator read and review the Safety Data Sheets for the appropriate health and safety warnings before use. **Safety Data Sheets are available.**
