

109 Flux Thinner

Product Description

Kester Flux Thinners are used for reducing solids or replacing evaporated solvent, resulting in maximum efficiency of the flux in an open vessel application such as foam fluxing or dipping. To select a thinner, review the associated Technical Data Sheet. If you have any further questions please contact Kester Technical Support.

Application

Flux thinners should be added if the Specific Gravity or the Titration test results indicate that the solvent needs to be increased. Test for flux balance should be performed every 4 hours of direct exposure to air. Please refer to the Technical Data Sheet for the proper test method and ranges.

Storage, Handling and Shelf Life

Solvent based thinners are flammable. Store away from sources of ignition. Shelf life is 1-year from the date of manufacture when handled properly and held at 10-25°C (50-77°F).

Health and Safety

This product, during handling or use, may be hazardous to your health or the environment. Read the Safety Data Sheet and warning label before using this product.
